Easy Multiplication!!!

| Problem | Submissions |

Problem Statement

You are given an array of N integers.The next line will contain Q queries.In each query you are given two intgers L and R. Now calculate the multiplication between **L to R**. If the multiplication between L to R is **greater than zero** print YES otherwise print NO.

Note: The input file is too large. Must use fast I/O and don't use endl. Use "\n" instead of endl.

Fast I/O: Add these 2 lines at the first of main function -

```
ios::sync_with_stdio(false);
cin.tie(NULL);
```

Input Format

- The first line contains a single positive integer **N** (size of the array).

- The second line will contain **N** ntegers (values of the array).

- The third will contain a **Q** . The next lines will contain **Q** queries. In each line of the query will contain two values **L** and **R**

Constraints

- $1 \leq N \leq 10^6$

- $1 \leq Q \leq 5 * 10^6$

- $0 \leq A_i \leq 2$ (Where $1 \leq i \leq N$)

- $1 \leq L \leq R \leq N$

Output Format

If the multiplication between L to R is **greater than zero** print YES otherwise print NO.

Sample Input 0

```
16
1 0 2 1 1 2 2 1 2 0 2 1 0 1 1 0
7
3 7
4 13
6 7
5 16
8 11
15 15
2 5
```
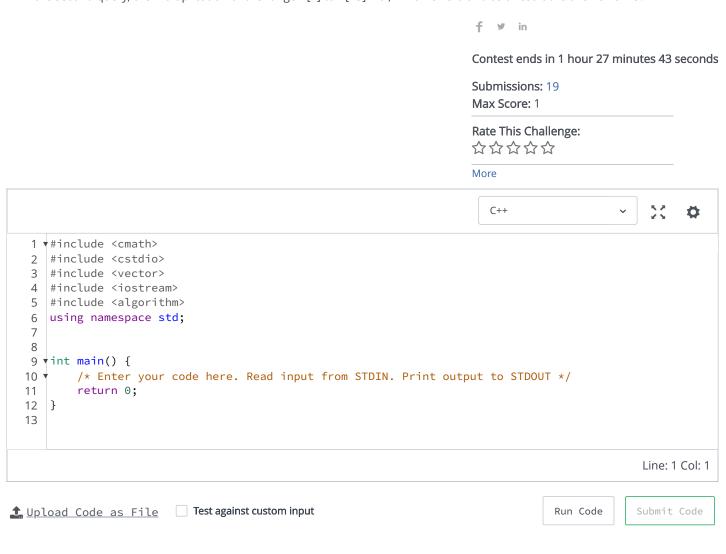

Sample Output 0

```
YES
NO
YES
NO
NO
YES
NO
```

Explanation 0

- In the first query, the multiplication of the range A[3] to A[7] = 8 , which is greater than zero and as a result the answer is YES.

- In the second query, the multiplication of the range A[4] to A[13] = 0 , which is zero and as a result the answer is NO.
